End of Life (EOL) summary view

With the release of version 5.0, you will have the option to view the End of Life Care Co-ordination information as a pre-configured clinical view on the Care Record Summary screen. The information will mirror the sections of the End of Life & Palliative Care Co-ordination library template, but is populated by the clinical codes in the patient's care record, so you don't have to add the data using the template.

Only the entries and/or sections relevant to the currently selected patient will appear.

The End of Life Care Co-ordination view will be added to the inactive views within care record configuration. The view must be activated, then transferred to the selected views list in order to appear on a users summary screen.

You cannot edit the pre-configured clinical views.

Any changes you make in user options to clinical views are applicable to the current user only and *not* to the rest of your organisation.

Activate as a clinical view for the organisation

1. Access Summary.

Click ^{em,} point to **Care Record**, then select **Summary**. If you do not have a patient selected you are prompted to choose one.

- ^{2.} On the ribbon, click 🐯.
- 3. In the Organisation Options section of the left-hand pane, click **Clinical Views**.
- 4. Select the **Inactive** list.
- 5. Select the End of Life Care Co-ordination view, then click Activate.
- 6. Click **Yes** to clear the alert.
